

Sweaty hands? Shaft dented, scratched, dirty, sticky?

Forget gloves, powders, and sprays. Forget shaft maintenance.

The Sleeve gives you the smoothest, lowest friction stroke you've ever experienced. Slide the precision engineered Sleeve onto your shaft and feel what a smoother, straighter stroke does for your confidence and your results. The Sleeve lets you focus on your shot – not on that annoying sticky stroke!

- Advanced, high tech polymer materials.
- No more gloves, powder, hand chalk, or sprays to mess up your clothing and equipment.
- Nothing slides on your skin – effortless, unrestricted stroke.
- Makes good play possible for beginners and those with handicaps such as arthritis.
- Slightly thicker than your shaft, for a solid, stable bridge.
- Compact 4" size travels easily in your cue case or pocket.
- Stays safely on stick during play.
- Best with 12mm ferrule or larger.

There's more! Standard hand bridges typically have the cue sliding on one tiny piece of skin, allowing the stick to swivel during the hit stroke. Countless misses are caused by crooked strokes. Eliminate these pivot errors with **The Sleeve**. It forces the stick to stroke straight, sliding perfectly through a 4" sleeve rather than against small, sticky pieces of skin.

- **Straighter strokes, guided by The Sleeve.**
- **Improves accuracy of stroke delivery.**
- **Reduces pivot errors – make more shots!**
- **Slides like a skate on ice.**
- **Will last for years.**

Protects your
stick too!
